Fault Data

Push the Fault Review button on the master control. Push the down arrow button and the highest (most recent) fault should come up. After recording the information from the first fault, push the fault review button again to bring up the second screen of information for that fault. Record the second screen information and then get the next highest number fault information

Fault #	Type	Comp#	Suct T	lochw T	Date	Time	ECHW	LCHW	ECW	LCW
